Portfolio with my personal projects, videos and documentation: danielballoi.github.io

Available on-site, hybrid or fully remote · willing to travel · driving licence and own car · available for night shifts

PROFILE

3 years managing production releases for a banking enterprise client (Mooney), personally carrying out releases to lower environments (test and pre-production) and keeping them aligned with production: running CI/CD pipelines, MySQL database releases, release tracking and monitoring, Change Request management and active participation in the CAB. Developer background (Java / Spring Boot, JavaScript / React, SQL and PL/SQL) and certified project management skills (CAPM). I extended my experience to the cloud with the AWS certification and an end-to-end DevOps project on AWS, built entirely by myself.

CERTIFICATIONS AND EDUCATION

AWS Certified Solutions Architect – Associate

Amazon Web Services · valid until Sep 2029

Sep 2026

Certified Associate in Project Management (CAPM)

Project Management Institute · "Above Target" in all domains

May 2026

Professional Qualification: Software Development Technician (EQF 5)

Autonomous Region of Sardinia

Dec 2022

Claude (AI) training

Anthropic

High School Diploma in Accounting – Tourism specialisation

ITC "Pietro Martini", Cagliari

TECHNICAL SKILLS

Release and CI/CD: running and monitoring CI/CD pipelines, production release management, MySQL database releases, environment alignment, CAB, release tracking, change management, GitHub Actions, semantic versioning

Cloud (personal project and certification): AWS (EC2, S3, IAM, Lambda, EventBridge, SNS, Budgets), Terraform, cloud-init

Containers and systems: Docker, Docker Compose, Nginx, Linux, Bash, networking (CIDR, DNS, security groups)

Databases: MySQL, SQL and PL/SQL

Development: Java / Spring Boot, JavaScript / Node.js, React, Git, AI-assisted development (Claude Code)

Security: Dependabot, CodeQL, secret scanning, least-privilege IAM

Tools and practices: Jira, ServiceNow, Excel, application management, runbooks, risk management, planning

PROFESSIONAL EXPERIENCE

Release Specialist | Software Developer — Stackhouse S.r.l. (Spindox group)

Cagliari, Italy

Jan 2023 – Jun 2026

Mooney project · Release Manager

Apr 2023 – May 2026

- Managed production releases for Mooney (banking enterprise): planning, tracking and monitoring releases, managing Change Requests and actively taking part in the CAB (Change Advisory Board).
- Personally carried out releases to lower environments (test and pre-production) and kept them aligned with production: running CI/CD pipelines and MySQL database releases.
- Managed bug fixes end to end, from analysis with Dev and QA teams to production release.
- Planned activities (Jira, ServiceNow, Excel) and coordinated, as PMO, the AWS cloud activities carried out by the engineering teams.

Sisal project · Junior Backend Developer

Feb 2023 – May 2023

- Analysed and fixed bugs in Java / Spring Boot applications backed by MySQL, from reproducing the issue to fixing the code.

EdenRed project · Junior Backend Developer

Jan 2023 – Mar 2023

- Handled bug tickets on electronic invoicing: analysed and retrieved data with SQL queries and restored missing data with PL/SQL scripts.

Backend Software Developer Intern — Televideocom Srl

Oct 2022 – Dec 2022

Cagliari, Italy

- Independently built an end-to-end backend project in Java and Spring: design, implementation and development lifecycle.

Bartender — Stonegate Group

Apr 2018 – May 2019

London, UK

- Fast-paced international environment: daily English, working under pressure and in a team.

PERSONAL PROJECTS

Balloi Immobiliare — end-to-end DevOps on AWS

2026

github.com/danielballoi/balloi-immobiliare

Portfolio with my personal projects, videos and documentation: danielballoi.github.io

- Took a Node.js / React / MySQL web app to production on AWS with Docker, GitHub Actions CI/CD and Terraform infrastructure.
- Fully automated server bootstrap with cloud-init: configuration and latest backup pulled from S3 via an IAM role, app online in about 2 minutes.
- Versioned releases from semantic tags with images on GHCR and generated changelogs; production pinned to an exact version.
- Reduced 93 vulnerability alerts to zero through risk-based triage (Dependabot, CodeQL, secret scanning).
- Diagnosed and fixed real incidents (instance terminated by mistake, out-of-memory at boot) at no extra cost; documented runbook and ADRs.
